This is to address the issue of not allowing the weather to be broadcast on XM Radio. This would be a very unwise and highly unsafe situation for the trucking industry. Many truckers, including my brother, rely on the weather service when they are out on the open road to help reroute themselves out of dangerous weather conditions. If it wasn't for this very useful information, there would be a lot of fatalities caused by unsafe conditions. It would also result in delayed merchandise to be delivered for us the consumers. So please reconsider making this VERY DANGEROUS change to the XM Radio lineup. On behalf of the thousands of truckers and their families who worry about them, thank you for listening. If one voice helps you change your mind it will be worth it.
